Jagram

IS A UNIQUE COMPANY, DIFFICULT TO COMPARE WITH ANY OTHER

For example, we believe that success in business can be combined with family life and the pursuit of passions. We also believe that this can be achieved through a work ethic that benefits everyone, be it customers, business partners or employees (not forgetting of course ingenuity, intelligence and hard work). We recognize that this requires constantly learning and respect for the natural and social environment.

In practice, we honestly strive to supply our customers with best products at best conditions, for employees our attitude means no long working hours, and the chance to enjoy free weekends, while for suppliers it means they are paid on time. The company also fulfills all its obligations, pays its taxes, earmarks a significant budget for further training of its team members, and maintains good, long-term relations with business partners. It also means that the company renounces the now widespread use and importing of goods, materials and raw materials that are harmful to the environment and people, despite the potential profitability of such activities.

Quality & CRAFTSMANSHIP

We are garden wood specialists with 30 years of professional experience; we love working in wood and creating beautiful, functional and durable products. We are proud to have earned ISO, FSC, and ITB certificates and supply our customers with products of the highest quality.

Rest assured you have a 10 year guarantee against rot with all of our products.*

Your product will never need treating. No further maintenance required.

Made from wood sourced from responsible forestry. „Look for FSC® certified products”

All Jagram products have been designed and manufactured to the highest standards.

The entire range is manufactured using timber from FSC® managed forests.

Visit www.jagram.co.uk for more information

*applies to products with no contact with the ground, valid in EU and UK

Glulam curves

Jagram is one of Europe's leading manufacturers of glued laminated timber curves for outdoor and indoor use. We use our own patented solutions to create a technologically unique production process - our factory computers and machines will turn timber laths into laminated curves of the most elaborate shapes in just 40 minutes. If you are looking for a bespoke product - we are the best choice there is.

Leisure collection

To create our loungers collection we invited the best designers and timber engineers to focus on ergonomics as well as the visual effect. As a result it combines luxury and comfort to enhance any standard décor, lending it an exclusive, unique appearance. They are also featuring quality, weatherproof, European made, shape adjusted cushions.

- assembly without tools

Glued laminated wood for exterior use

PRODUCTS MADE OF BONDED WOOD.

WHY IT'S A GOOD IDEA TO INCLUDE SUCH PRODUCTS IN YOUR RANGE OF GOODS.

For many years, solid wood was most commonly used in the production of wooden structures. Unfortunately, this raw material has some disadvantages, glued laminated wood is the answer to the growing requirements of customers, often chosen for its quality, durability and aesthetics. We produce car ports, arbours, hammocks, swings, roofs, pergolas and many other forms, using bonded wood. This material enjoys unflagging popularity thanks to its enormous advantages.

- Glued laminated wood is in itself lightweight and yet is of exceptional strength, so structures made of bonded timber are light and yet weather resistant. This type of material does not disintegrate, delaminate or become distorted – so often the case with solid wood.
- This type of raw material is fire retardant – upon contact with fire only the outer layer is charred, while the rest of the elements remain intact.

- A bonded timber element can be bent into an arch, ellipse, semicircle or circle. This means it can be used to create unique, effective and functional designs. Glued laminated wood can be formed into virtually any shape.
- Bonded timber elements can also satisfy aesthetic needs. They can be used to create structures that could never be made from solid wood. Thanks to this, we can add elegant, designer wooden elements to our interiors or gardens.
- All elements made using this bending and bonding technology are finished in a way that enables them to be precisely and easily assembled.
- This is a totally natural and renewable material.

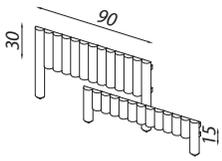

In addition to all these advantages of glued laminated wood, there is also its cost – only slightly greater than that of solid wood. It's worth paying a slightly higher price, if in return we can be assured of many years of durability and a unique design.

Garden architecture products that your customers will love

By garden architecture products we mean, among others, arbours, pergolas, bridges and sheds. Structures and elements built of wood fit both traditional, rustic and modern arrangements. They are becoming more and more popular with each season. Their design is not complicated and assembly is easy. Wood can fulfill various functions in the garden, ranging from the functional to purely aesthetic. Arbours or pergolas can be used to keep those especially enchanted spaces hidden from prying eyes.

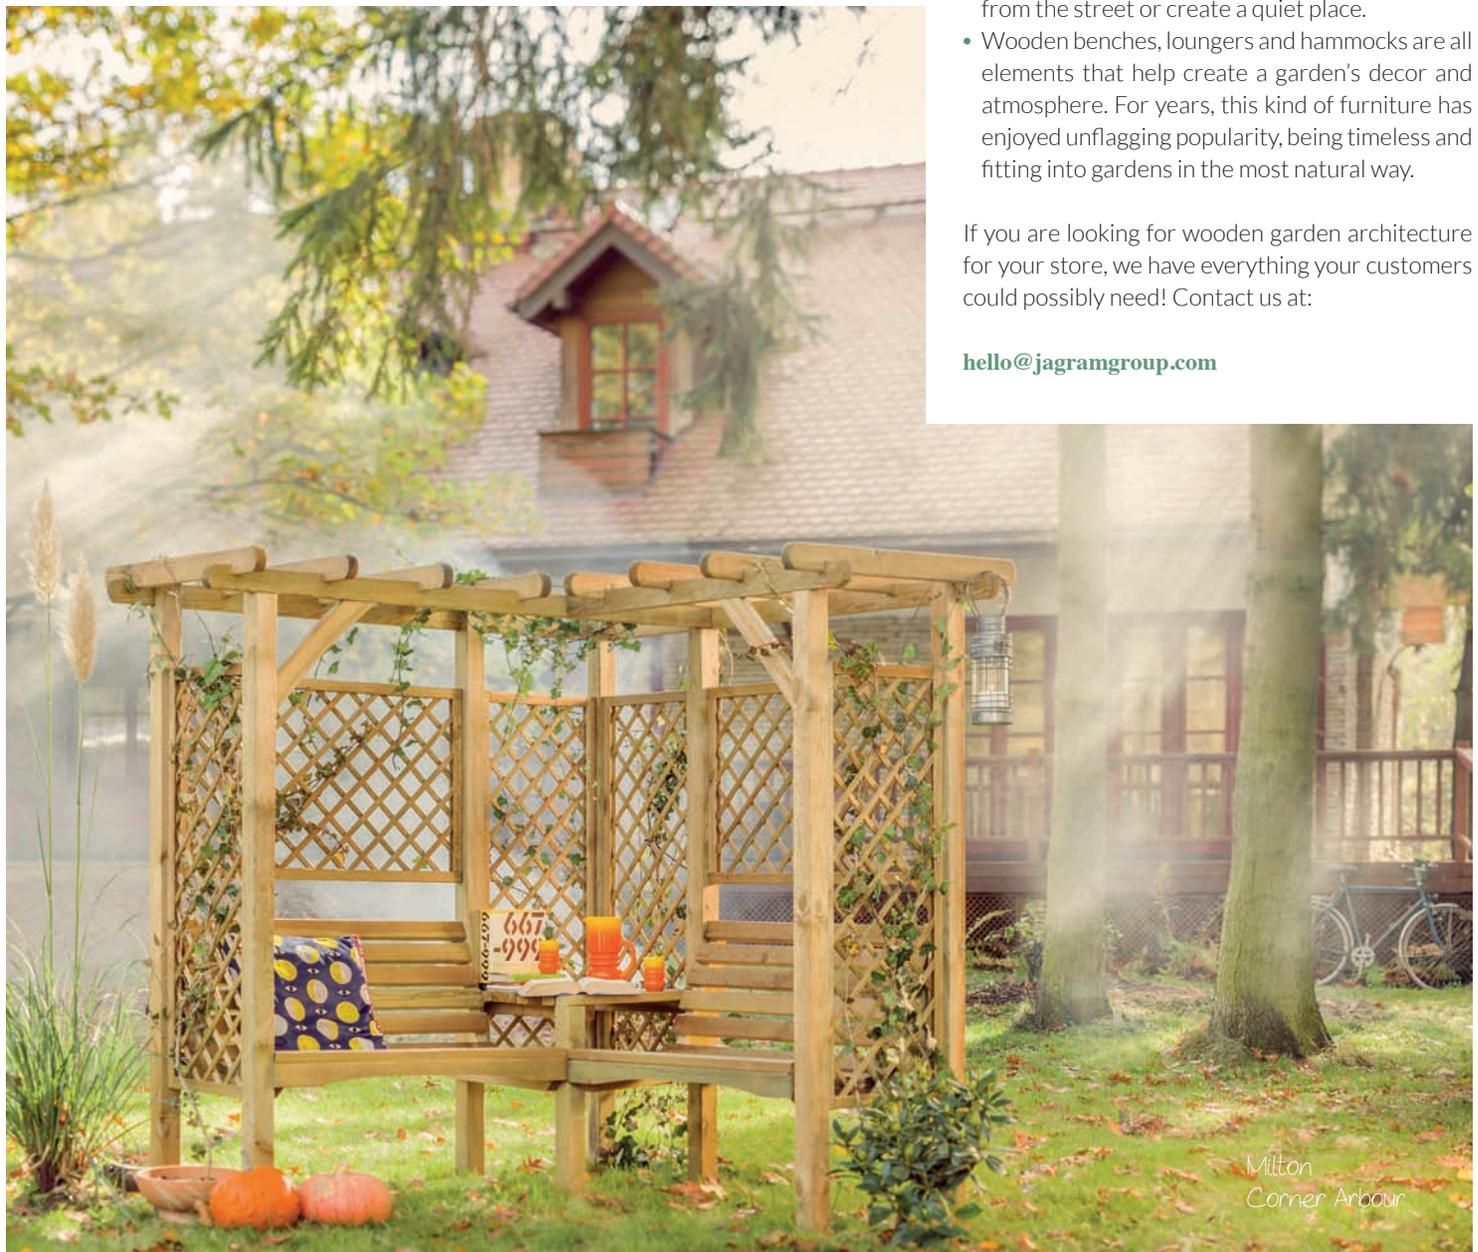

Arbours and garden pavilions serve as open-air rooms. They can be so furnished to allow meals to be eaten in them with family and friends while relaxing among one's plants regardless of the weather. These buildings are of light construction, most often made of wood with openwork walls, ideal for climbing plants. They are available in a wide and diverse range, a guarantee that every customer will find a suitable structure to ideally fit into his planned garden.

- Pergolas, trellises and timber-built walls supporting climbing plants make it easy to organize the space in the garden and arrange separate areas. They also make it possible to conceal separate utility areas and can protect an uncovered terrace from the sun and wind. Wooden partitions are usually small elements, but often play a very important role. They are especially useful in small gardens, where there is insufficient room for a hedge of tall bushes that would shield the garden from the street or create a quiet place.
- Wooden benches, loungers and hammocks are all elements that help create a garden's decor and atmosphere. For years, this kind of furniture has enjoyed unflagging popularity, being timeless and fitting into gardens in the most natural way.

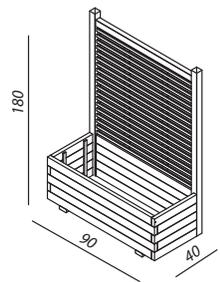

If you are looking for wooden garden architecture for your store, we have everything your customers could possibly need! Contact us at:

Wooden garden trellises

A WOODEN TRELLIS IS THE IDEAL SURFACE FOR PLANTS TO CLIMB ON AND IT MAKES A PERFECT PARTITION IF WE WANT TO CREATE AN INTIMATE SPACE.

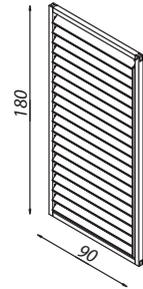

Such trellises were first used as supports for climbing plants. A wooden trellis is the ideal surface for plants to climb on, however, we are more and more often discovering that they also have many other advantages. We set them up in our gardens, or on terraces and balconies, to isolate ourselves from neighbours, block an unsightly view or to create an intimate space in which we won't be observed. We can then arrange plants to climb them, but sometimes a wooden openwork partition is simply enough to make us feel more at home.

Trellises of various densities may be useful for different purposes. For climbing plants, grilles with larger openings are more convenient, but if the trellis is to act as a partition, it should be denser. There are traditional trellises with square sections set at different angles, as well as more modern ones, with dense sections between narrow openings in the shape of long rectangles.

A well-chosen trellis will not only provide an effective support for vines or act as a partition, but will also function as a truly decorative feature of the garden.

Fencing panels & gates

ACORN

What ecological certificates are awarded to products made of wood?

From an ecological point of view the most important certificates are FSC and PEFC. These concern the source where the wood being used first originated. First, let's decipher these mysterious abbreviations. FSC stands for Forest Stewardship Council® and PEFC is the Program for the Endorsement of Forest Certification. These are non-profit organizations that administer the largest international certification programs in the timber industry. Their goal is to help combat the trade in illegally harvested timber, which in some parts of the world is an enormous problem and the cause of ecological disaster. These organizations are in competition with each other, with PEFC being particularly popular in Scandinavia.

Joining the certification program is expensive and requires a lot of effort from a company such as Jagram, which is a manufacturer of products made of wood. The company must collect and maintain documents proving the origin of the wood it uses. This requires tracking all stages of obtaining, processing and transporting the raw material. It also means that each time it must check the companies from which it purchases its raw materials.

Planter with trellis is a perfect support for your plants in the garden, on patio or balcony.

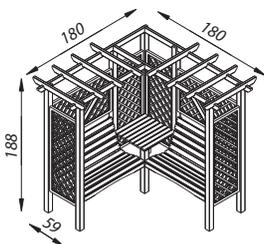

Basil ocimum

Wood as a natural raw material is not available in unlimited quantities. Inappropriate harvesting damages the environment, but in the long run it also damages our business by closing off long-term sources of wood. That is why it is so important to us that our wood is sourced responsibly – for the sake of the planet, but also for our future as the Jagram company.

ROMANTICA ARBOUR

- comfortable armrests
- comfortable, ergonomic bench
- arched roof
- ideal for climbing
- flat packed

The Romantica Arbour is a stunning garden arbour that has been carefully crafted from pressure treated FSC approved Northern European Redwood. It is a wonderful seating area that offers shelter and shade. The Venetian style roof and trellis side and back panels enable you to train plants to climb up and around this beautiful wooden arbour that has been designed to last.

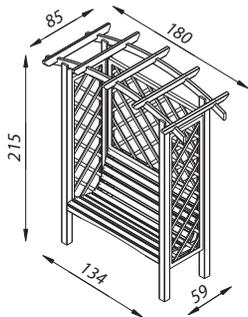

40186

OXFORD ARBOUR

40194

DOVER ARCH

- posts: 70 x 70 mm
- trellis gap size: 120 x 120 mm
- trellis lath: 30 x 10 mm

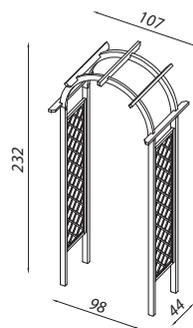

The Olimpia Arch is a classic garden arch that will become a beautiful focal point within your garden. Plants can be trained to climb the trellis side panels creating a stunning floral arch that will compliment your garden path or alternatively you can use this wooden arch to make an attractive entrance to your garden.

41100

OLIMPIA ARCH

- posts: 70 x 70 mm
- trellis gap size: 150 x 90 mm
- trellis lath: 30 x 10 mm

40121

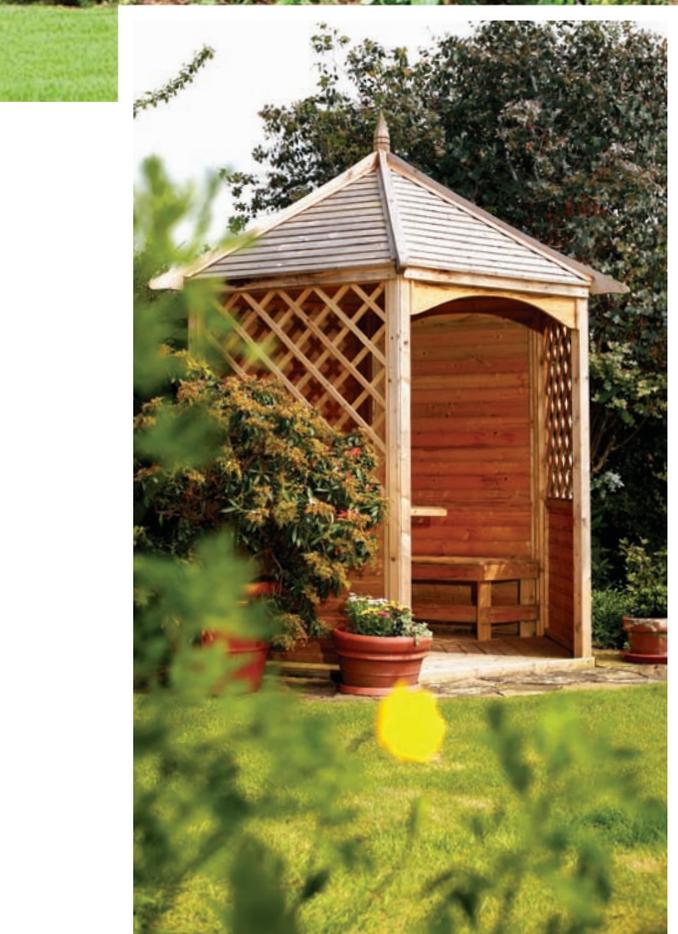

ROSE ARCH

- posts: 45 x 45 mm
- trellis gap size: 60 x 60 mm
- trellis lath: 20 x 8 mm

The Rose Arch is a truly beautiful wooden garden arch with English trellis panel sides that will enable you to enhance your garden vertically. Plants can be trained to climb up and around this wooden arch creating a beautiful focal point over a path or walkway.

Gazebos

J-Class by Jagram is one of the leading designers and manufacturers of quality garden structures in Europe. Our product range includes a large selection of gazebos, garden canopies, greenhouses, summerhouses, bikeports and carports crafted from high quality timber and produced to the highest industry standards. We also manufacture versatile bespoke garden structures to customer's design.

Gazebo accessories

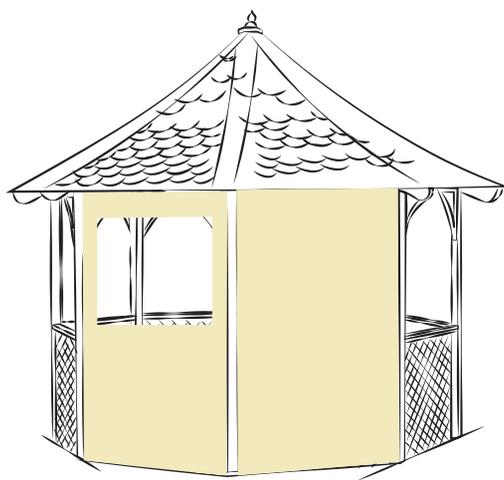

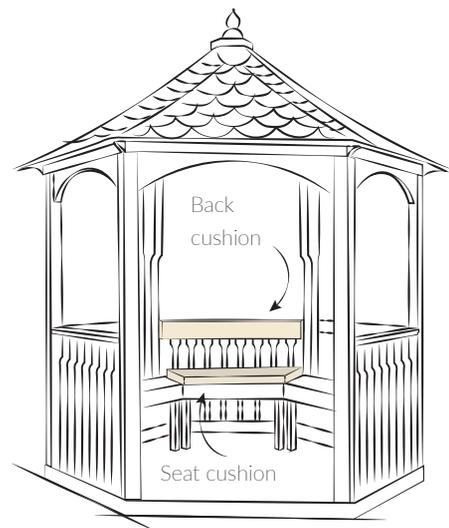

CUSHIONS FOR OUTDOOR USE AND CANVAS PANELS MAKE AN EXTREMELY COMFORTABLE ADDITION TO ANY GAZEBO. APART FROM GREATER COMFORT, THEY WILL ALSO ADD CHARM AND A TOUCH OF CLASS. THESE ACCESSORIES ARE HANDMADE IN EUROPE FROM THE HIGHEST QUALITY, FLAME RETARDANT MATERIALS.

CUSHIONS FOR OUTDOOR USE - made of heavy-duty, weather-resistant fabric and available in elegant beige. Two types of cushion are available - for sitting on or as back support. Each cushion has a YKK® zipper and is made of materials that meet the BS 5852 fire resistance standard. Both the outer fabric and filling meet the above-mentioned standard.

- Increased resistance to sunlight
- Natural resistance to bacteria
- Waterproof
- Anti-static
- Flame retardant

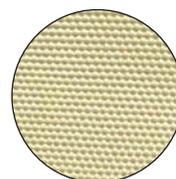

Semi-transparent Canvas Panel

Opaque Canvas Panel

CANVAS PANELS - the panels are designed to be easily rolled up. Their upper edge is attached by stainless steel hooks while. The bottom edge is fixed to the belts. The solutions are inspired by the fixtures used in sailing.

Both versions can be rolled up and fixed. Panels are available only in one colour - sand.

- Increased resistance to sunlight
- Natural resistance to bacteria
- Waterproof
- Flame retardant

FIRST THERE IS THE IDEA.

Often its first impulse arises during trade fairs. Our representatives regularly visit trade fairs, for example the design fair in Milan, or present our products at specialist fairs featuring the wood and garden industries. They keep their eyes open, learn about the latest trends, meet the best designers and talk about the philosophy of product creation. What is most important for us is the use of natural materials, minimizing the negative impact of the production process on the environment and ecological packaging. We look for people who think similarly. We also travel a lot and try to draw inspiration from these trips. We look at the works of such great designers and architects as Santiago Calatrava, Oskar Niemeyer and Philippe Starck. We are interested not only in solutions involving wood, but also metal and stone. That was one of the reasons why we worked on the technology for bonding wooden arches. We wanted to use these solutions in the production of our products, but not every shape can be simply cut from wood.

How a new design is created

THEN A DESIGN MUST BE CREATED.

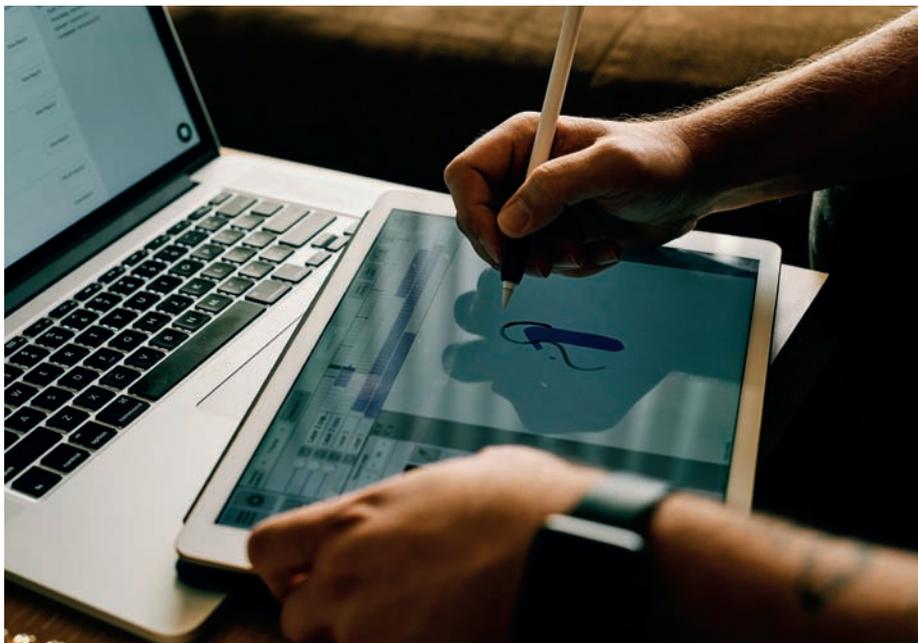

We organize competitions for young designers, as well as for employees and clients. We also work with leading European designers. We are currently financing their work thanks to a subsidy obtained from the Innovative Economy Program.

THE NEXT STEP IS TO TRANSLATE THE DESIGNER'S VISION INTO A PRODUCTION PROCESS.

We have been building a network of very competent and loyal suppliers for about 30 years and they are the most important people at the moment of creating a design. Our engineers work with them in checking whether what has been invented can be produced, whether it will be a good product and how much it will cost to produce. Indeed we consult with suppliers from the very beginning of the design, making sure that its execution will be possible. We would like to emphasize that particularly successful projects were realised in cooperation with our clients who distribute our products on local markets. They have unique knowledge of local tastes and needs. They also impose tough conditions as to packaging methods, optimising production costs and use of materials.

www.jagramgroup.com

A GREAT DEAL OF TIME PASSES BETWEEN WHEN AN IDEA FOR A NEW JAGRAM PRODUCT ARISES AND ITS ARRIVAL ON THE MARKET.

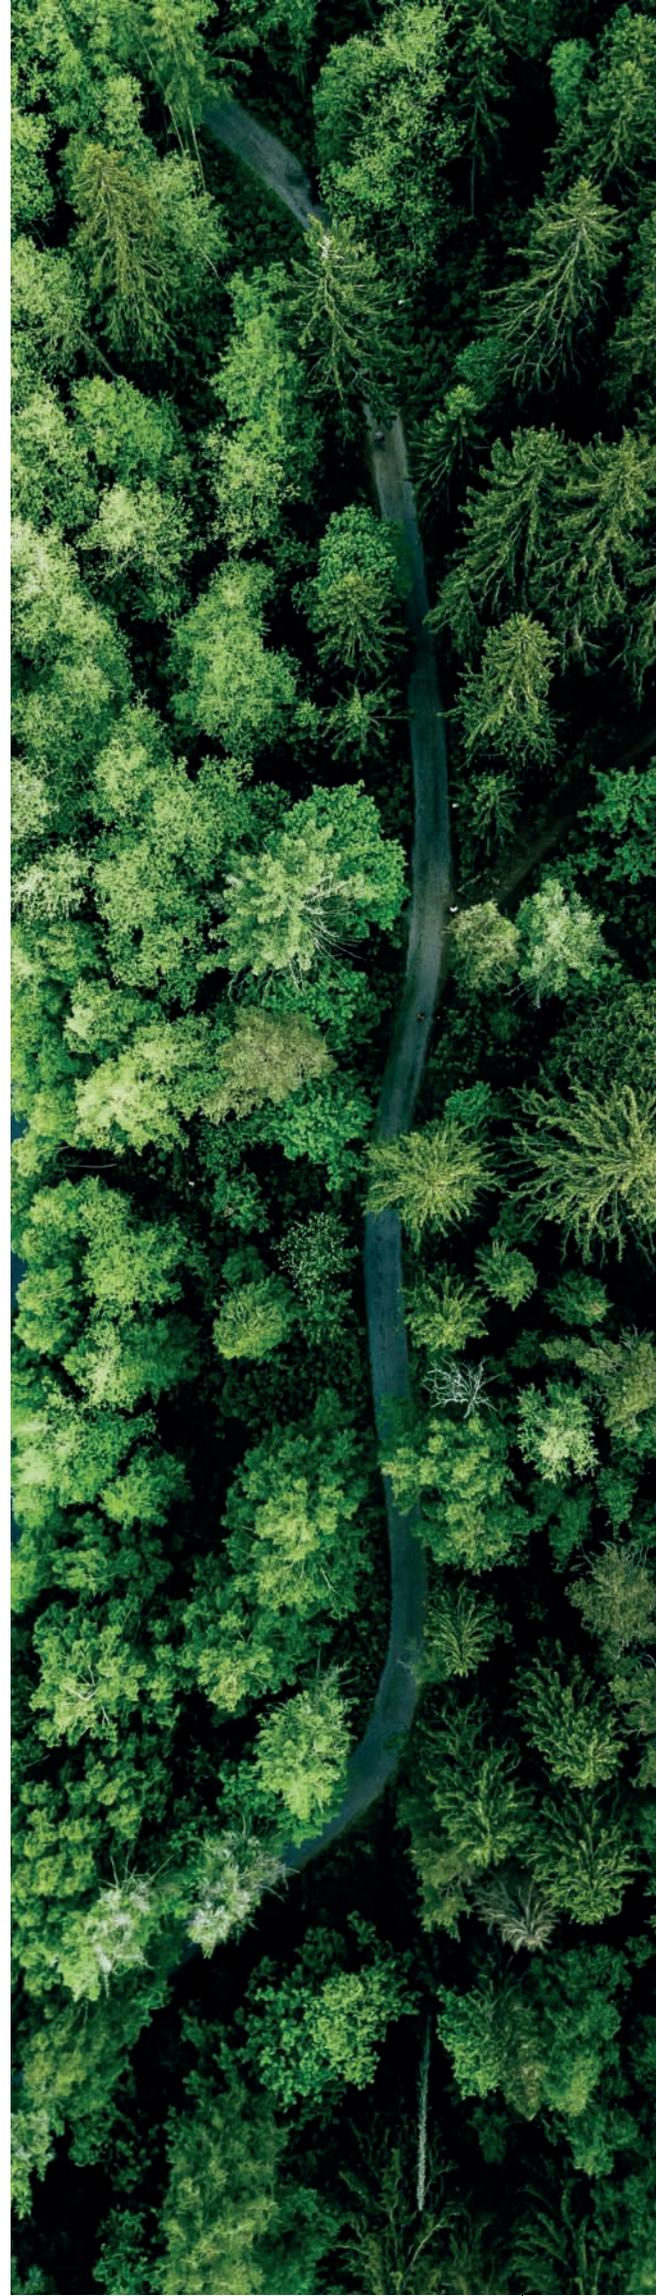

Dear customers

AS WE CELEBRATE JAGRAM'S 30TH ANNIVERSARY,
WE WISH TO ESPECIALLY THANK OUR PARTNERS
THAT HAVE CHOSEN TO BUY OUR PRODUCTS.
DESPITE THE PANDEMIC, IT'S BUSINESS AS USUAL AT
